

What Is the True Length of One Metre?

It is easy to refer to known magnitudes such as length, weight, thickness, area, pressure etc. and believe that we all agree upon, and understand, what we are talking about. But what if I told you that I have experienced that 100 μm was roughly equal to 93 μm ? People tend to believe that what is presented in a display is the absolute truth, whereas in reality you must compare your instrument against a traceable reference, before you can trust your measurements results.

Lorentzen & Wettre is pleased to be able to offer Preventative Maintenance and Calibration (PMA) to all our customers, regardless of your location. The PMA visits are made either by our dedicated partners' service engineers or by Lorentzen & Wettre.

Please contact your local Sales & Service office for more information.

Yours faithfully
Lorentzen & Wettre

Patrik Bentelius
Service Manager

A complete range of services with the same high quality as our other products. Choose the solutions that suit you best from:

PMA

One of the advantages of having a Preventative Maintenance Agreement (PMA) is that you are able to budget for annual maintenance and calibration costs whilst greatly minimising the risk of operational disruptions.

CALIBRATION

Our professional, factory-trained technicians use specially developed calibration tools to guarantee that all of the factors that affect the functionality and accuracy of your instrument can be verified using proven, accurate and reliable techniques. Working to these high standards ensures that all instruments within your group will perform within the specified tolerance range.

A WIDE RANGE OF SERVICES

Start-up and commissioning for new instruments, tailor-made training packages, extended warranty, upgrading of older instruments, instrument verification, the L&W PPS Master Kit, the Paper Machine Optimisation Programme and in-house measurement/analysis of your paper sample.
