

SISYMBRIA EUROPÆA.

Auctore VICTORE DE JANKA.

- | | |
|---|--|
| 1. Flores in axillis foliorum fere omnium solitarii, gemini vel terni | 2 |
| Racemi terminales aphylli i. e. folia interfloralia nulla | 5 |
| 2. Calyx pedicellis longior; folia inferiora runcinata, superiora hastata; semina 1-seriata | 3 |
| Calyx pedicello æquilongus; folia pinnatisecta (semina 2-seriata, flores albi) | <i>Sisymbrium supinum</i> L. |
| 3. Siliquæ in foliorum axillis 2—3-næ; flores luteoli | 4 |
| Siliquæ in foliorum axillis solitariæ; flores albi | <i>S. runcinatum</i> L.
(S. Lagascae Asso.) |
| 4. Pedicelli $\frac{1}{2}$ ''' longi; siliquæ vix pollicares; foliorum lobi integerrimi | <i>S. polyceratium</i> L. |
| Pedicelli ultra lineam longi; siliquæ $1\frac{1}{2}$ pollicares vel longiores; foliorum lobi acute dentati (racemus ultra medium ebracteatus) | <i>S. confertum</i> Stev. |
| 5. Folia tenuiter 2—3-pinnatisecta; flores minuti lutei; herba pubescentissima e pilis stellatis constante canescens | <i>S. Sophia</i> L. |
| Folia simplicius dissecta vel indivisa | 6 |
| 6. Siliquæ subulato-attenuatæ vel conoideo-acute (breves) | 7 |
| Siliquæ nunc tota longitudine æquilatæ, nunc utrinque æqualiter attenuatæ vel apicem versus incrassato-dilatatæ | 11 |
| 7. Siliquæ rachi adpressæ | 8 |
| Siliquæ patulæ vel patentissimæ | 9 |
| 8. Siliquæ rectilineæ (pubescentes) | <i>S. officinale</i> Scop. |
| Siliquæ tortæ vel curvatæ | <i>S. corniculatum</i> Cav. |
| 9. Siliquæ tenues acerosæ; foliorum caulinarum segmenta grosse dentata; flores albi (pedicelli brevissimi siliquis fere crassiores): | <i>S. erysimoides</i> Desf. |
| Siliquæ crassiores curvatæ, haud acerosæ; foliorum caulinarum segmenta integra; flores flavi (siliquæ asperæ) | 10 |

10. Pedicelli vix 2''' longi, siliquæ lanceolato-subulatæ *S. asperum* L.
 Pedicelli longiores, siliquæ magis lineares *S. Boissieri* Coss.
11. Foliorum supremorum pinnatisectorum segmenta gracillima,
 filiformia v. capillaria (siliquæ patulæ longissimæ pedicellis
 valde abbreviatis vix crassiores) *S. altissimum* L.
 (S. pannonicum Jacq.)
 Foliorum segmenta latiora vel folia superiora omnino* indivisa 12
12. Siliquæ apice haud dilatatae 13
 Siliquæ vel styli apice dilatati 37
13. Totus pedicellus crassitudine siliquæ (rigidæ) vel parum angustior 14
 Pedicelli siliquis multo tenuiores 22
14. Pedicelli calyces manifeste superantes; flores magni lutescentes 15
 Pedicelli calyce breviores vel vix longiores; flores parvi albi vel
 (rarius) rosei 16
15. Folia caulina pleraque petiolata, superiora dissecta *S. orientale* L.
 (S. Columnæ Jacq.)
 Folia caulina sessilia, superiora indivisa (subglaberrimum) :
S. crassifolium Cav.
16. Folia omnia petiolata reniformia vel triangulari-cordata *S. Alliaria* Scop
 Folia numquam talia 17
17. Totum glaberrimum *S. bursifolium* L.
 ± hispida vel hirtula 18
18. Flores subsessiles albi *S. rigidum* Stev.
 Flores conspicue pedicellati rosei 19
19. Stylus cylindricus stigmatibus longior 20
 Stigma subsessile *S. contortuplicatum* DC.
20. Pedicelli demum crassitudine siliquarum, stigma 2-fidum :
S. parviflorum Gris.
 Pedicelli siliquis angustiores, stigma truncatum vel retusum 21
21. Stigma truncatum *S. nanum* DC.
 Stigma retusum *S. confusum* Boiss. (sub *Malcolmia*).
22. Pedicelli tota longitudine æqualiter filiformes gracillimi 23
 Pedicelli apice incrassati 31
23. Flores flavi 24
 Flores albi 32
24. Folia ± runcinata 25
 Folia numquam runcinata 29
25. Siliquæ juniores inflorescentiam superantes *S. lrio* L.
 Siliquæ juniores gemmas haud superantes 26
26. Siliquæ rectilineæ (saltem haud contra axin pressæ) laxæ 27
 Siliquæ versus axin inclinatæ varieque flexa atque curva :
S. acutangulum Rehb.

27. Caules petioli pedicellique hirsuti *S. Læselii* L.
 Caules petioli pedicellique sparse setulosi vel glabri 28
28. Pedicelli vix 2''' longi, filiformes siliquis multoties breviores;
 folia summa dissecta *S. austriacum* Jacq.
 Pedicelli 4—5''' longi, capillares siliquis 3-plo breviores; folia
 suprema lineari-lanceolata integerrima *S. Assoanum* Losc.
29. Folia amplā omnia regulariter acute pinnatisecta; pedicelli fere
 siliquarum longitudine *S. tanacetifolium* L.
 Folia indivisa vel minus profunde nec acute laciniata 30
30. Folia omnia indivisa, summa ovata vel oblonga acuminata
S. strictissimum L.
 Folia nunc omnia dissecta, nunc solum infima, summa am-
 bitu sublinearia *S. junceum* MaB.
31. Siliquæ erectæ («pedicello plus quam octies longiores»); foliorum
 lobi dentati; flores parvi *S. laxiflorum* Boiss.
 Siliquæ unilateraliter inclinatae («pedicello sextuplo longiores»);
 foliorum lobi profunde laciniato-dentati; flores magni *S. arundanum* Boiss.
32. Folia pinnatisecta 33
 Folia indivisa vel parum divisa 34
33. Caules ut plurimum ramosissimi; pedicelli fructiferi gracillimi
elongati patentes; siliquæ angustæ, semper ± arcuatæ; stigma
 globulosum stylo gracili filiformi insidens; valvæ 3-nerves:
S. Zanoni Ball.
 Caules simpliciores; pedicelli breviores stricte erecti; siliquæ
 latiores rigidiores rectilineæ; stigma sessile stylo haud latius;
 valvæ 1-nerves *S. pinnatifidum* L.
34. Folia caulina basi hastata 35
 Folia caulina basi haud hastata 36
35. Siliquæ glabræ in pedicellis patulis erectæ; stylus brevissimus
 (subnullus) *crassus*; sparse puberulum *S. toxophyllum* MaB.
 Siliquæ patulæ vel adscendentes pubescentes; stylus brevis
tenuis; totum pube laxè stellari vestitum *S. pumilum* Steph.
36. Pedicelli siliquæ dimidiam æquantés vel longiores... .. *S. Thalianum* L.
 Pedicelli vix trientem siliquæ longi; flores 2-plo majores
S. suecicum Fries.
37. Stylus distinctus; siliquæ rectæ pollicares *S. hispanicum* Jacq.
 (S. contortum Cav.)
 Stigma sessile; siliquæ sursum curvatæ breviores *S. fugax* Lag.
